

QuickIT™

Thank you for supporting the QuickIT™ on Kickstarter! I hope you enjoy using them. Here are just a couple of the many examples on how to get the most out of your QuickIT™.

Basic "No Knot" attachment method

1. Thread the cord through one of the holes and under the QuickIT™ body.
2. Pass the cord back under itself, as show in the picture.
3. Pull the free (short) end tight.

You could also use a double figure 8 knot, double overhand knot etc.

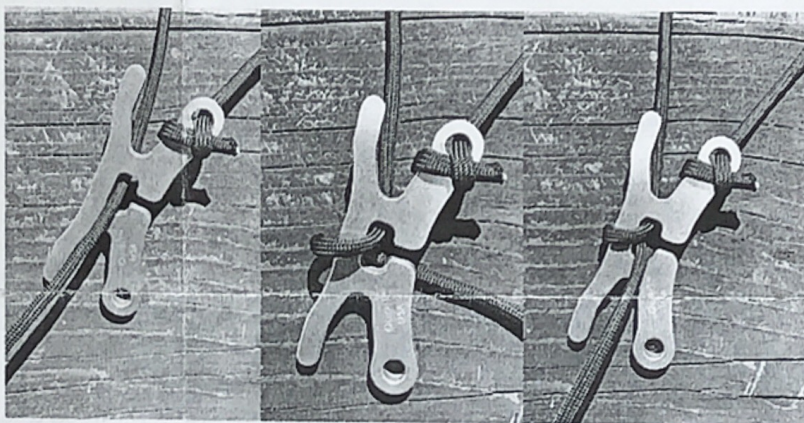

Most common use (tent, tarp, canopy lines, etc.)

1. Once the cord is secured to one of the holes, wrap the free end of the cord around an anchor point like a tent peg, tree, bumper, etc.
2. Pass the cord through the center slot of the QuickIT™ and wrap it around the opposite side and then back through the slot.
3. Pull the cord tight.

With tension off the cord, you'll be able to adjust the QuickIT™ position. Once tension is reapplied, the QuickIT™ will hold securely once again.

The QuickIT™ is great for tents, tarps, backpacks, clotheslines, flags, banners, emergency preparedness and more!

You can also reference the original Kickstarter project page to see some of the other uses of the QuickIT™ including videos and animations.
